

CLEANING DIFFERENT SURFACES

When it comes to cleaning, the process should be relatively simple right? Not all cleaning products are created equal, meaning they're not safe to use on all types of surfaces! HydrOxi Pro® Concentrated Cleaner and HydrOxi Pro® Cleaning Wipes are two of the most versatile products that can be used on more surfaces and in more places than any other competing product!

COLORED FABRICS & CARPET

Traditional cleaning products have the tendency to bleach or stain colored fabrics making a bigger mess than you started with. HydrOxi Pro® does not contain any bleaching agents and will not harm colored clothing, linens or any other fabrics.

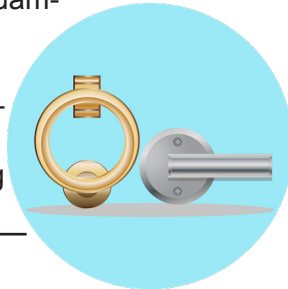

LEATHER PRODUCTS

Traditional cleaners should NOT be used on any type of leather. Alcohol that's added to these cleaners cause leather to lose its natural oil and become dry and brittle. HydrOxi Pro® is a safer alternative on leather products to remove stains and messes.

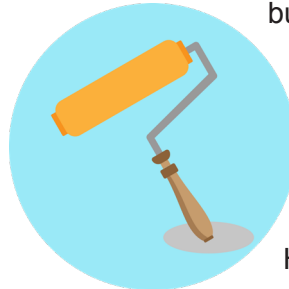

BRASS, COPPER, SILVER

Harsh chemical products do more damage than good when it comes to natural metals. They're corrosive and most times will damage surfaces past the point of fixing. HydrOxi Pro® is a safer alternative for wiping away dirt and germs.

PAINTED SURFACES

Some paints are more durable than others, but none of them are strong enough to hold up to the regular more abrasive cleaners. These cleaners tend to run on painted surfaces like walls and will leave streaks where the chemical eats through the layers or paint and damages any type of finish. HydrOxi Pro® is tough enough to remove unwanted grime, but gentle enough to be used on any painted surface.

PET SUPPLIES

Chlorine is a toxic chemical found in most cleaning wipes and products that causes serious harm to respiratory function, skin and eyes. This chemical is heavy and falls to low-lying places where animals live making them more susceptible to the dangers of these products. HydrOxi Pro® is the only pet safe product on the market that will get the job done and give you the satisfaction of keeping your furry friends out of harm's way.

FINISHED & UNFINISH WOOD

Harmful solvents and high alcohol content in most traditional cleaners cause cloudy white spotting on finished wooden products and can warp and blemish unfinished wooden surfaces.

HydrOxi Pro® works to dissolve and pull out stain compounds and dry the surface in the same process
